DIVAAGAR R B

Software Engineer

(+91) 9489829816 divaagarrb@gmail.com divaagar-portfolio divaagarrb Leetcode

OBJECTIVE

Backend-focused Software Engineer with experience building Python-based APIs, data-driven applications, and automation workflows. Skilled in Flask, SQL, and scalable data processing, with strong interest in backend reliability, performance optimization, AI-driven systems, and production engineering.

EDUCATION

B.E. - Computer Science - Government College of Technology, Coimbatore **CGPA: 8.02** (2021 - 2025)

High School - Karur Vetri Vinayka MHSS, Karur **Percentage: 95.4%** (2021)

SKILLS

Languages: Python, SQL, C++, JavaScript

Backend: Flask, REST APIs,Node js

Databases: PostgreSQL, SQL

Frameworks: React js

Concepts: OOP, Data Structures, Algorithms, DBMS, API Design

Tools: Git, Linux, Postman

Soft Skills: Problem Solving, Communication, Team Collaboration

EXPERIENCE

Software Trainee- Aximsoft **- Coimbatore** November 2025– Present

Developing backend solutions and data-driven applications using Python to support enterprise business requirements.

- Developed RESTful APIs using Flask for backend services and frontend integration.
- Optimized SQL queries and data-processing workflows to improve API response efficiency.
- Implemented data validation, exception handling, and logging mechanisms for reliable backend operations.
- Automated repetitive internal workflows using Python scripts, reducing manual processing effort.
- Collaborated using Git-based workflows, code reviews, and debugging practices in a production-oriented environment.
- **Tech Stack:** Python, NumPy, Pandas, Flask, SQL, Git

PROJECTS

Resume Parsing using LLM

AI-driven resume parser leveraging Large Language Models to automate candidate profile extraction and classification.

- Implemented natural language processing pipelines to extract entities such as skills, experience, and education from resumes.
- Enhanced context understanding and parsing accuracy by leveraging advanced LLM-based techniques.
- Developed RESTful API endpoints for real-time resume uploads and structured JSON output generation.
- **Tech Stack:** Python, Flask

TNEA Allotment Analysis

Comprehensive data analytics project focused on analyzing seat allocation trends in Tamil Nadu Engineering Admissions (TNEA).

- Collected and processed admission and seat matrix data from 700+ colleges, performing detailed cleaning and validation to ensure accuracy.
- Conducted thorough statistical analysis to uncover patterns in seat allocation, college-wise preferences, and enrollment trends across districts.
- Developed interactive visual dashboards using Python libraries to display seat occupancy, cutoff trends, and district-level insights for easy interpretation.
- **Tech Stack:** Flask, Pandas

ACHIEVEMENTS

- **Winner -** Sciensea 2k23, Erode National Kongu College of Engineering, Paper Presentation
- **Winner -** Progeni'23, Government College of Engineering, Salem (National Level), Paper Presentation
- **Runner-up -** E-Pulz, TPGIT, Vellore (National Level), Code Dilemma
- **Winner -** E-Pulz, TPGIT, Vellore (National Level), Paper Presentation

CERTIFICATIONS

- **Programming for Everybody (Getting Started with Python) -** Coursera **-** November 2023 [Certificate]
- **Software Testing -** NPTEL **-** October 2023 [Certificate]
- **Machine Learning with Python -** Coursera **-** May 2024 [Certificate]
